

DOL 53

Ammonia sensor

For other language variants of this document we refer to www.dol-sensors.com or your local dealer.

1 Product description

DOL 53 consists of an electro chemical diffusion sensor and signal processing electronics. DOL 53 works like a "nose". DOL 53 only transmits the concentration measured at the sensor. The measuring unit ppm (parts per million) is a volume concentration. DOL 53 is connected to suitable control unit over a 3-wire cable. The measuring signal during normal operation is between 0 V and 10 V.

Figure 1: Operation curve.

DOL 53 is used for the stationary continuous monitoring of ammonia concentrations in the ambient air under atmospheric conditions.

Safety-related information

- Before using this product, carefully read the Technical user guide.
- Strictly follow the Technical user guide. The user must fully understand and strictly observe the instructions. Use the product only for the purposes specified in this document.
- Do not dispose of the Technical user guide. Ensure that they are retained and appropriately used by the product user.
- Comply with all local and national rules and regulations associated with this product.
- Use only genuine spare parts and accessories. Otherwise the proper functioning of the product may be impaired.
- Do not use a faulty or incomplete product. Do not modify the product.
- Notify the supplier in the event of any component fault or failure.

Warning symbols and their meaning

The following warning symbols are used in this document to identify and highlight the relevant warning texts which require increased care and attention on the part of the user. The meanings of the warning symbols are defined as follows:

Indicates a potentially hazardous situation which, if not avoided, could result in physical injury, or damage to the product or environment. It may also be used to alert against unsafe practices.

Indicates additional information on how to use the product.

1.1 Product survey

140247 DOL 53 Ammonia sensor

140248 DOL 53 Replacement sensor head

140236 DOL 53 dust filter (5 pcs.)

DOL 53 measures the ammonia in the house's air.

Can be used for registration and control of ammonia levels in the air.

140238 DOL 53 protection against water

Kit for water protection for DOL 53.

140284 DOL 53 cable with connector (2 m)

2 meter wire with plug for DOL 53.

140285 DOL 53 test equipment gas, complete

Test equipment for NH₃ measurement with DOL 53.

140299 DOL 53 – test gas adapter

2 Installation

DOL 53 should be installed at the centre of the area to be monitored. This ensures optimum measurements. DOL 53 must be installed out of reach of animals, accessible for maintenance work. It must be suspended from the lug at the end of the housing or alternatively with a mounting bracket on the wall.

DOL 53 must not be mounted near the fresh air supply, in front of windows or doors, large electrical consumers (electromagnetic influences), in exhaust air ducts, behind air washers or behind screens. DOL 53 must not be mounted in inaccessible areas. Protect against direct exposure to dust or splash water. For wall mounting, unobstructed gas entry must be ensured.

DOL 53 must not be suspended from the electric cable.

Figure 2: DOL 53 must be mounted vertically with the sensor pointing down; $\pm 30^\circ$ at a location with low vibration and, as far as possible, stable temperatures.

3 Connection

Installation, servicing and troubleshooting of all electrical equipment must be carried out by qualified personnel in compliance with the applicable national and international standard EN 60204-1 and any other EU standards that are applicable in Europe.

The scope of delivery includes an approx. 2.5-meter-long cable connection (5) for the electrical installation up to the junction box (1). For the electrical supply and signal transmission to the control unit cables with adequate cross-section must be used. Connect the cable from the installation kit to the connector (4) and in the junction box (1). Connect the GND cable in the control unit to protective earth.

The cable must be routed in a manner to obtain a "water loop" (2) for water to drop off. Insert the cable into the clamping device (3) at the mounting lug. Do not stress the cable.

1. Remove the sensor element from the metal container.
2. Insert it into DOL 53 (6).
3. Secure it with the mounting ring (7).

- The warmed up fault-free operation of DOL 53 is indicated after max. 30 minutes by the green LED being illuminated.
- A faulty operating state is indicated by the yellow LED flashing.

5 LED indication

LED indication	Sensor status	
 YELLOW flashing slowly	Electrical supply faulty or interrupted.	Check installation for cable break. Check operation of the power supply unit of the control unit. Check electric voltage in the junction box or at the sensing head with a multi-meter.
	Short circuit in supply cable.	Check installation for short circuit.
	Overvoltage or undervoltage at the sensing head.	Check operation of the power supply unit of the control unit. Check electric voltage at the sensing head with a multi-meter.
	Incorrect voltage (e.g. 230 V AC) applied, electronics damaged.	Replace the sensing head.
	Sensing head faulty.	Replace the sensing head, contact supplier.
 Alternating GREEN and YELLOW	Sensor is warning up to be ready for measurements, signal level 0 V.	No activity. Flashing stops after max. 30 minutes.
 Constant GREEN	Normal operation.	
 GREEN flashing quickly	Concentration measurement in the test window 40 ppm to 60 ppm, result of a test with 50 ppm test gas.	No activity. Flashing stops after max. 5 minutes.
 Constant YELLOW	Internal fault detected by electronics, signal level 0 V.	Replace the sensing head.
 YELLOW flashing	Measured concentration below - 5 ppm, below the measuring range, signal level 0 V.	If the fault continues for more than 1 day, replace sensor.
 GREEN flashing	Measured concentration above 105 ppm outside the measuring range.	Ventilate with fresh air.
 Alternating GREEN and YELLOW	Age monitoring, sensor older than 3 years, service life expired, see date on sensor rating plate.	Replace the sensor.

6 Troubleshooting instructions

Error	Cause	Remedy
Packaging is damaged.	Damage in transit.	Contact the supplier in case the sensor is damaged.
No measured value at the control unit.	Electrical connection faulty or interrupted.	Check installation for cable break.
	DOL 53 aligned incorrectly, not vertical.	Install DOL 53 in accordance with mounting instructions, vertical $\pm 30^\circ$.
	Sensor element faulty or used up.	Replace sensor element.
	Sensing head faulty.	Replace the sensor.
Incorrect measured value at the control unit.	Loss of sensitivity.	Check sensitivity with test gas.
	Filter clogged.	Replace filter.
Unexpected measured value at the control unit.	Brief interference pulses <5 seconds.	Interference caused by electrical equipment, e.g. lighting, fans or heaters. Identify device and suppress interference.
Unstable measured value.	Dynamic signal fluctuations with a period of more than 5 seconds can arise from turbulence with fresh air.	No activity, continue to monitor.
Wet sensor.	DOL 53 was cleaned with water.	Wipe DOL 53 dry.
	Condensation.	

7 Maintenance

The sensor element must be replaced after 3 years of operation at the latest. End of service life see date on the sensor element rating plate.

Carry out the daily visual inspection to detect operation readiness.

Have specialists carry out the annual inspection and sensitivity check.

Replace the dust filter in front of the sensor element if clogged. A clogged filter prolongs the response time of the sensor element. This affects the sensitivity. The dust filter must always be replaced prior to checking the sensitivity.

DOL 53 must be removed during cleaning and disinfection. After removing the connector, screw on the screw plug. A missing screw plug leads to corrosion of the connector.

Cleaning

Clean DOL 53 surface with lukewarm water. Check for mechanical damage.

Disposal

Dispose of the product in accordance with the applicable rules and regulations.

8 Technical data

Max. sensor element storage period	See date on the label, sensor element box or shipping carton
Warranty for sensor element and DOL 53	2 years from delivery date
Expected sensor element service life	3 years from commissioning, expiration date see sensor element rating plate
Supply voltage	Rated voltage 24 V (18 V to 30 V DC); DC < 0.2 V _{ss}
Power consumption	<10 mA
Signal transmission to the control unit	0 V to 10 V corresponds to 0 to 100 ppm
Measurement range	0 to 100 ppm NH ₃
Signal transmission resolution	0.5 ppm
Accuracy	1.5 ppm or ±10% of the measured value
Response time T ₅₀	<30 seconds
Long-term drift	< ±10 % of the measured value/year
Cable type	3-wire
Ambient temperature (operation)	0 °C to + 50 °C
Ambient humidity (operation)	15% to 95% RH
Air pressure (operation)	700 hPa to 1300 hPa
Ambient temperature (storage)	-20°C to +60°C
Dimensions (H x W)	155mm x 75mm
Housing material	PA
Weight approx.	450 g
Chemical resistance	Typical detergents, disinfectants, alcohol, surfactants, peracetic acid, soap
Protection class	IP 65
Compliance	CE

Danger of damage to the sensor. The sensor must not be transported unpacked in air traffic. The sensor can lose its measuring sensitivity.
