

u[sonic] ULTRASONIC WIND SENSOR

Seawater resistant and perfectly heated

The combined ultrasonic sensor u[sonic] for wind direction and wind speed. The seawater resistant sensor is perfectly heated and ideal for use under cold climate conditions. The equipment is connected by an 8 pole screw connector. The measured values can be requested over a variety of interfaces.

- without moving measuring elements
- 2 parameters measurable
- intelligent heating depending on wind speed and wind direction
- easy installation, easy to maintain

APPLICATIONS

- professional meteorological application
- wind turbines on- and offshore
- ship weather station
- building automation
- traffic and industrial meteorology
- wind warning
